Discover the Power of Nature

Melaleuca Oil
[ Melaleuca alternifolia Tea Tree Oil ]
Valued for hundreds of years as a remedy for a variety of health concerns and many skin ailments, Melaleuca Oil has since been proven by research to have powerful natural antiseptic properties. But Melaleuca Oil offers much more …

_T36-C5_ is extremely high-quality Melaleuca Oil. Less than 30% of all Melaleuca Oil produced qualifies at this standard. It has at least 36% terpinen-4-ol and less than 5% cineole. _T36-C5_ is a versatile, beneficial oil with high levels of antiseptic and penetrating power that virtually everyone can use every day.

_T40-C3_ is a very rare grade of oil that comes from a unique stand of Melaleuca alternifolia trees. This oil contains at least 40% terpinen-4-ol and has less than 3% cineole. It is very expensive and recommended for those with extremely sensitive skin.
You can find the beneficial effect of Melaleuca Oil in many Melaleuca products.

Melaleuca Oil has proven its worth over the centuries!

T36-C5

“T” stands for terpinen-4-ol, a compound inside Melaleuca Oil that gives the oil its antiseptic power. The “36” means that the oil is 36% terpinen-4-ol – far exceeding the Australian quality standard of 30%.

“C” stands for cineole, the compound that gives Melaleuca Oil its penetrating power. Too much cineole and the oil can be irritating. The “5” means that the oil is only 5% cineole – far stricter than the Australian quality standard, which allows 15% cineole.

T-what? C-who?

Research has found that Melaleuca Oil from Melaleuca alternifolia contains over 100 compounds. Some, like viridiflorene, are found nowhere else in nature.

(+)-Terpinen-4-ol (C_{10}H_{18}O)  1,8-Cineole (C_{10}H_{18}O)

Two of the most important compounds, which are tested in every batch of Melaleuca Oil, are terpinen-4-ol and cineole – the “T” and the “C” in the Melaleuca Oil brand name.

Many new discoveries have been made in just the last 5 years by researchers who continue to study this amazing natural oil.

We are convinced there is much more to learn. Melaleuca will continue to perform additional research to develop new products and discover new uses for this very intriguing product of nature. We greatly anticipate every new discovery that might be unveiled.
When *Melaleuca alternifolia* trees at the plantation are harvested, they’re cut all the way to the ground. No worries. They regrow year after year. Some trees have been harvested for over 85 years – making them an extremely reusable resource.

Even after the trees are harvested, the leaves are collected, and the oil is distilled, 100% of the wood and leaves from the harvested trees is reused.

- The steamed leaves and twigs are dried out, and a quarter of this material is used to fuel the furnace and boiler of the distiller.
- The rest is spread back onto the soil as a nutrient-rich mulch that holds in moisture and reduces erosion.
- Even the ash from the boiler is spread back on the soil.

**All that’s left over from the steam distillation process is 100% pure Melaleuca Oil, which is poured and sealed into bottles.**

Why keep this old way of doing it when newer technologies – like chemical, microwave, or even sonar distillation – could do it faster? Because one of Melaleuca Oil’s great advantages is that it’s 100% natural, and Melaleuca insists on doing nothing to modify its natural state.

---

**100% Amount of plant material reused after distillation.**
